Foody CookBook

Make Your Food App

Architecture to be used - MVVM for android, MVC for iOS
Programming Language - Java for android

Using this provided API create an App
Use the API - https://www.themealdb.com/api.php

The App will have these features,

1. Show random food whenever the user opens the App.
   That is the app will provide some random foods whenever the user opens the app.

2. Make a search section for the user to find food.
   That is a search bar or a tab for users to find delicious food they want

3. Keep a section to store Favourite Food
   SO that user can mark their favorite food item they found in the app

The App will provide help and recipes for the people who love to cook.
